Akku Magziyeva

Aspiring DevOps Engineer

Almaty, Kazakhstan · akku_rafael@icloud.com · +7 702 000 2815 · linkedin.com/in/akku-magziyeva · github.com/Akkumag

SUMMARY

DevOps-trained engineer building hands-on cloud infrastructure projects — AWS, Terraform, Kubernetes, CI/CD. Completed a practical DevOps Engineering program and have since built and deployed two full projects solo, end to end, using infrastructure as code throughout. Looking for a structured international internship to grow in a real engineering team.

PROJECTS

Serverless Memo App — AWS, solo project

A serverless notes app built end to end: React frontend on S3/CloudFront, Node.js Lambda backend, HTTP API Gateway with a JWT authorizer, Cognito authentication, single-table DynamoDB design. Provisioned entirely with Terraform and deployed through a GitHub Actions pipeline using OIDC — no long-lived AWS credentials anywhere. Deliberate design call: authorization is enforced at API Gateway, before any request reaches compute.

EKS + GitOps + Monitoring — AWS, solo project

A Task API deployed to a real AWS EKS cluster, provisioned with Terraform (VPC, IAM, node groups), deployed and synced via ArgoCD, with Prometheus/Grafana monitoring installed through the same GitOps flow. Built to get hands-on with cluster administration and GitOps beyond basic app deployment — real architecture decisions (e.g., `ignoreDifferences` to keep ArgoCD's auto-sync from fighting a redacted field), deployed and verified live, then torn down cleanly.

Both projects: github.com/Akkumag

SKILLS

Cloud & Infra: AWS (IAM, EC2, VPC, S3, Lambda, API Gateway, DynamoDB, Cognito, CloudFront, EKS), Linux, Docker, Kubernetes

IaC & Automation: Terraform, GitHub Actions

Observability: Prometheus, Grafana

Databases: PostgreSQL, MySQL, MongoDB (project/training level)

AI-assisted engineering: Claude Code — plan-mode workflows, line-by-line diff review before accepting any change

Scripting: Bash, Python

EDUCATION

DevOps Engineering Program — 312 School. Practical, lab-based training: Linux, networking, AWS, Terraform, Docker, Kubernetes, Git, CI/CD (GitLab CI, GitHub Actions), Bash, Python.

B.A., Social Pedagogy and Self-Cognition — al-Farabi Kazakh National University (KazNU), 2017.

CERTIFICATIONS

Certified Kubernetes Application Developer (CKAD), 2026
