## DevOps Engineer | Platform Engineer

Almaty, Kazakhstan (Remote) · akku\_rafael@icloud.com · +7 702 000 2815 · linkedin.com/in/akku-magziyeva · github.com/Akkumag

---

### SUMMARY

DevOps/platform engineer with 5 years of experience building internal developer platforms — self-service infrastructure on Kubernetes and Terraform, with CI/CD automation, for an engineering org of 1,000+ people.

### EXPERIENCE

#### Platform Engineer

Nov 2023 — Present

*HelloFresh — Foundations (internal data-platform team) · Remote*

- Built self-service Terraform/CLI tooling for Tardis, HelloFresh's internal data platform, abstracting Terraform, IAM, and permissions — cut data-onboarding setup from weeks or months to a single PR and a few days.
- Contributed to platform adoption growing 300%+ and managed data assets growing 650%+ across engineering teams.
- Owned versioning and release safety for the Terraform module — validation, tests, and staged rollouts — so infrastructure changes never broke teams already depending on it.
- Ran the Kubernetes/Docker infrastructure behind the platform's Kafka and RabbitMQ messaging layer, as part of the shift from a monolithic data platform to data mesh.
- Used an internal AI-powered PR-review agent, wired into the pull-request workflow, on nearly every Terraform/Kubernetes change — checked its feedback and fixed flagged issues before merge.
- Used Claude Code iteratively for infrastructure work — planned changes, implemented and debugged Terraform/AWS/Kubernetes errors, and validated against tests and terraform plan before applying.

#### Platform Engineer

Sep 2021 — Oct 2023

*GumGum — AI-powered contextual ad-tech · Remote*

- Contributed to a reusable Terraform EKS module, adding configurable node-group and IAM resources/variables — improved repeatability of cluster provisioning across environments.
- Worked hands-on with AWS, Kubernetes/EKS, Docker, and Terraform as part of a platform/DevOps team supporting a cloud-native engineering environment.
- Contributed to CI/CD pipelines, infrastructure automation, and deployment troubleshooting alongside senior platform engineers.
- Supported monitoring/observability and incident response for platform infrastructure.

### SKILLS

**Cloud & Infra:** AWS (IAM, EC2, VPC, S3, EKS), Linux, Docker, Kubernetes

**IaC & Automation:** Terraform, GitHub Actions

**Messaging:** Kafka, RabbitMQ

**Observability:** CloudWatch

**Databases:** PostgreSQL

**AI/Agentic:** Claude Code (daily driver), internal AI PR-review tooling, plan-mode workflows, diff review discipline, context engineering (CLAUDE.md)

**Scripting:** Bash, Python

### EDUCATION & CERTIFICATIONS

B.A., Social Pedagogy and Self-Cognition — al-Farabi Kazakh National University (KazNU), 2017

Certified Kubernetes Application Developer (CKAD)
