SUMMARY

DevOps/Platform engineer with 5 years across AWS and Kubernetes — built and owned Terraform infrastructure a 6-engineer platform team depends on, from self-service provisioning to a CI gate that catches breaking changes before they ship. Runs every infrastructure change through Claude Code end to end, plan to validation.

EXPERIENCE

Platform Engineer Nov 2023 — Present

HelloFresh via Loopin · Remote

Foundations — 6-engineer internal data-platform team

- Built self-service Terraform/CLI tooling for HelloFresh's internal data platform — cut data onboarding from weeks of manual Kafka/S3/schema setup to same-day.
- Built a CI gate that diffs IAM policy across Terraform module versions — added after a version bump silently broke a team's onboarding (patched same-day) — has caught 2 more permission drifts before merge since.
- Ran the Kubernetes/Docker infrastructure behind the platform's Kafka and RabbitMQ messaging layer, as part of the shift from a monolithic data platform to data mesh.
- Runs Claude Code end to end for Terraform/Kubernetes changes: plan, implement, diff-review, validate, apply.
- Works directly with data analysts and scientists to turn their platform requirements into shipped infrastructure, balancing self-service speed with data-privacy and security compliance.

Platform Engineer Sep 2021 — Oct 2023

GumGum via Loopin — AI-powered contextual ad-tech · Remote

- Extended a shared Terraform EKS module with configurable node-group and IAM resources — used to provision clusters repeatably across environments.
- Diagnosed and resolved a cluster-autoscaler bottleneck during a traffic burst — raised node-group minimums and loosened scale-up cooldown, clearing the pod backlog and restoring normal latency within ~15 minutes.
- Worked hands-on with AWS, Kubernetes/EKS, Docker, and Terraform on a cloud-native platform/DevOps team, contributing to CI/CD pipelines and deployment troubleshooting.

SKILLS

Cloud & Infra: AWS (IAM, EC2, VPC, S3, EKS), Linux, Docker, Kubernetes

IaC & Automation: Terraform, GitHub Actions

Messaging: Kafka, RabbitMQ

Databases: PostgreSQL, MySQL, MongoDB

Observability: CloudWatch, Prometheus, Grafana

AI/Agentic: Claude Code (daily driver), internal AI PR-review tooling, plan-mode workflows, diff review discipline, context engineering (CLAUDE.md)

Scripting: Bash, Python

EDUCATION & CERTIFICATIONS

B.A., Social Pedagogy and Self-Cognition — al-Farabi Kazakh National University (KazNU), 2017

Certified Kubernetes Application Developer (CKAD)
